Chapters 3 9 contain description of the Business Processes and Existing Systems of the Hospitals/ Departments/ Services of the Ministry of Health. Where applicable the separate Sectors / Units are described. Chapter 10 contains the highlights of the issues discussed during the workshops that were held with the MOH Departments.

Information systems Strategy Study for the Ministry of Health - Final Report*

This document is the Final Report, which is the deliverable of Stage 4 of the Information Systems Strategy Study of the MOH.

It focuses on:

- The problems currently faced by the Ministry of Health especially with regards to the introduction of Information Technology (IT),

- The available enabling technologies.

- The management and organisational framework within which the Ministry of Health can develop and operate Information Systems to support its own business needs.

- The Project Catalogue

The objectives of the study were:

- To establish the current situation.

- To define the scope and initial Business Case of further computerisation.

- To define the priorities and prepare a catalogue of prioritised Information System and IT infrastructure projects so as to provide a sound basis for subsequent authorisation of those projects.

- To develop an Outline Plan for the deployment of Health Information Technology within the Ministry of Health.

- To identify any procedural and/or organisational issues associated with the implementation of the proposed IT projects.
